1. BUSINESS REALITY CHECK

Evidence over assumptions — Revenue over vanity metrics

Question	Answer	Confidence
Who pays?	Lagos SME vendors (Instagram sellers, e-commerce merchants). NOT dispatch riders — they are free users who power the network.	HIGH
Why do they pay?	Dispatcher dishonesty costs them real money daily — refunds, lost customers, package disputes. They will pay to eliminate that pain.	HIGH
How will they discover RouteIQ?	Word of mouth from other vendors in WhatsApp groups is the primary channel. Secondary: Instagram content, dispatch hub presence, referral programme.	MEDIUM
Biggest growth risk?	Map data quality at launch. If landmark routing doesn't outperform Google Maps on Day 1, retention collapses before word of mouth begins.	HIGH RISK
Biggest monetisation risk?	Vendors adopting the free tracking feature but resisting the subscription paywall. Freemium-to-paid conversion is the critical unknown.	HIGH RISK
Weakest assumption to validate?	That 5 out of 20 interviewed vendors will pre-commit to N4,999/month before the MVP is built. This single data point determines whether to code or pivot.	CRITICAL

2. STARTUP SUMMARY — 10 BULLETS

- RouteIQ Nigeria is a hyperlocal navigation and dispatch accountability platform built for how Nigerian cities actually work — landmark-based, not street-name-based.
- The core problem: Google Maps fails Lagos because Nigerian navigation uses informal landmarks and community names that no global mapping product has ever captured.
- Three user groups feel the pain daily: dispatch riders who get lost, vendors who cannot track their packages, and end customers who receive late or missing deliveries.
- Primary revenue customer: Lagos SME vendors paying N4,999–N29,999/month for live dispatcher tracking, proof of delivery, and a vendor dashboard.
- Network driver: Dispatch riders use the app free for landmark navigation. Their adoption creates the tracking data vendors pay for.
- The dispatcher accountability angle — catching riders who lie about their location — is the single strongest commercial hook. Vendors experience this pain multiple times per week.
- No Nigerian product currently combines landmark-based routing with real-time dispatch tracking. The competitive space is completely unoccupied.
- MVP scope: landmark address sharing + live rider GPS pin + photo delivery confirmation + lightweight Android app. 4 features. 7-day build sprint.
- The Nigerian logistics market is growing at 18% per year, and smartphone penetration in Lagos exceeds 65% among working-age adults.
- Founder has ML/data engineering skills, Lagos-native context, and a proven daily shipping habit — rare combination for this exact problem in this exact market.

3. EXECUTIVE SUMMARY

RoutelQ Nigeria sits at the intersection of two broken systems: navigation infrastructure that ignores Africa, and a logistics accountability gap that costs Nigerian vendors real money every single day. The product's genius is that it solves both with one flywheel — riders adopt for free navigation, vendors pay for the accountability layer that rider adoption creates. This is not a feature. It is a business model.

The pre-MVP stage means all assumptions are still hypotheses. The report is honest about this. But the combination of a clearly identified paying customer, a specific monetisable pain point, zero dominant incumbents, and a founder with both domain proximity and technical execution ability creates a stronger-than-average early-stage signal. The primary risk is not market size or competition. It is execution sequencing — specifically, whether the founder validates pricing before building and solves the map data bootstrapping problem before launching.

Investor One-Liner	RoutelQ is the navigation and dispatch accountability layer that makes Nigerian last-mile logistics work — for the 800,000 riders and 300,000 vendors Google Maps has never been able to serve.
Business Model	Freemium SaaS — riders free, vendors pay subscription (N4,999–N29,999/month). Per-delivery API pricing for logistics companies in Phase 2.
Revenue Year 1 Target	N72M ARR (~\$48K USD) — 500 vendors on Starter plan. Conservative and achievable from Lagos alone.
Primary Risk	Map data quality + freemium-to-paid conversion rate
Go/No-Go Signal	5 vendors pre-committing to pay before MVP build = GO. Fewer than 3 = validate harder before coding.
Time to MVP	30 days from today if interviews start immediately

4. BUSINESS MODEL CANVAS

Key Partners	Key Activities	Value Proposition	Customer Relationships	Customer Segments
• OpenStreetMap Nigeria contributors • MTN/Airtel (data bundle deals) • Lagos logistics associations • Paystack (payments) • Jumia/Instagram vendor networks	• Landmark map data collection • Android app development • Rider onboarding campaigns • Vendor sales (direct) • Data quality management	FOR VENDORS: 'Know where your package is and prove it was delivered — without a single phone call.' FOR RIDERS: 'Find any Lagos address using landmarks you actually recognise.'	• Self-serve freemium (riders) • Direct sales to vendors • WhatsApp vendor groups • Referral programme • Weekly delivery reports	PRIMARY (paying): • Lagos SME vendors • E-commerce sellers • Logistics SMEs SECONDARY (free): • Dispatch riders • Ride-hailing drivers
Key Resources	Channels	Cost Structure	Revenue Streams	
• Founder's ML/GIS skills • Lagos local knowledge • OpenStreetMap base data • Rider network (data flywheel) • 60-day challenge audience	• Instagram (vendor discovery) • Lagos dispatch hubs (rider onboarding) • WhatsApp vendor groups • LinkedIn (investor/collaborator) • App Store / direct APK	• Cloud hosting (AWS/GCP) • Android dev time • Map data collection ops • Sales & onboarding (founder-led) • Customer support	• Vendor subscriptions (primary) • Per-delivery API fees (Phase 2) • Fleet management SaaS (Phase 3) • Logistics data licensing (Phase 4)	

5. REVENUE & PRICING STRATEGY

Tier	Price/Month	Target User	Included	Year 1 Target
Free	N0	Dispatch riders	Landmark navigation, address sharing, basic GPS	5,000 riders (network foundation)
Starter	N4,999	SME vendors (1–3 riders)	Live tracking, delivery confirmation, 3 riders, dashboard	300 vendors = N18M ARR
Growth	N12,999	Active vendors (4–10 riders)	All Starter + weekly reports, 10 riders, analytics	150 vendors = N23.4M ARR
Pro	N29,999	Logistics SMEs (10+ riders)	Unlimited riders, API access, priority support, SLA	50 vendors = N18M ARR
API	N50/delivery	Logistics platforms & fintechs	Per-call landmark routing & tracking API	Phase 2 — post-PMF

Year 1 Revenue Model

Scenario	Vendor Count	Avg Revenue/Vendor	ARR (NGN)	ARR (USD)
Conservative	200 vendors	N9,000/month	N21.6M	~\$14,400
Base Case	500 vendors	N12,000/month	N72M	~\$48,000
Optimistic	1,000 vendors	N14,000/month	N168M	~\$112,000

Revenue projections assume Lagos-only, founder-led sales, no paid marketing in Year 1. USD conversion at N1,500/USD. Base case requires 500 vendors — achievable given Lagos has an estimated 50,000+ active e-commerce vendors.

Pricing Validation Priority

N4,999 Starter threshold	Below the N5,000 psychological resistance point. Test this exact figure in interviews — not a range.
ROI framing required	One lost package = N5,000–N20,000 loss for a typical vendor. Monthly subscription pays for itself in one prevented incident.
Annual pre-pay incentive	Offer 2 months free for annual payment upfront. Improves cash flow and reduces churn risk.
Pilot cohort pricing	First 50 vendors get Starter at N2,499/month for 3 months. Builds testimonials and reduces activation friction.

6. GO-TO-MARKET STRATEGY

Phase 1: Seeding (Month 1–2)

Do not launch publicly. Recruit 10 vendors and 50 riders manually. Be physically present at Lagos dispatch hubs — Yaba, Ikeja, Ajah — at 7am. Do not send a link. Put the app in their hands. Watch them use it.

Phase 2: Word of Mouth Engine (Month 2–4)

Every Lagos vendor has a WhatsApp group with other vendors. One Vendor Vivian telling her group 'I can now see my dispatcher in real time' is worth N500,000 in paid advertising. Design the product to be shareable — the vendor dashboard link should be forwardable with one tap.

Phase	Timeline	Channel	Goal	Success Metric
Seeding	Month 1–2	Direct / in-person at dispatch hubs	10 vendors + 50 riders using app	10 vendors complete 3+ deliveries

Word of Mouth	Month 2–4	Vendor WhatsApp groups, Instagram	Organic vendor referrals	20% of new vendors from referral
Content	Month 2–6	LinkedIn, Instagram, TikTok	Brand awareness + inbound	500 waitlist signups
Paid (light)	Month 4+	Instagram ads to Lagos vendors	Supplement organic growth	CAC under N15,000/vendor
B2B Direct	Month 6+	Outbound to logistics companies	Pro tier accounts	3 Pro clients signed

7. CUSTOMER ACQUISITION STRATEGY

Vendor Acquisition (Paying Customers)

Channel	Method	Cost	Expected Conversion
WhatsApp vendor groups	Post case study: 'How I stopped losing packages to lazy dispatchers'	N0	3–8% to trial
Instagram DMs (outbound)	DM 20 vendors/day with personalised pain point message	N0 (time only)	5–10% to demo call
Referral programme	1 free month per vendor who refers a paying vendor	~N5,000/referral	Highest LTV customers
Dispatch hub presence	Attend 3 Lagos hubs weekly; meet vendors who come to hand off packages	N0	High — warm context
LinkedIn content	Tem's 60-day challenge audience + startup community	N0	Low volume, high quality leads

Rider Acquisition (Free Users / Network)

Channel	Method	Goal
Dispatch hub onboarding	Hand-install app at Yaba, Ikeja, Ajah hubs during morning rush (6–9am)	50 riders in Week 1
Vendor mandate	Vendors tell their riders: 'Download RouteIQ to work with me'	Viral — each vendor brings 2–5 riders
Rider WhatsApp groups	Seed app link in Lagos rider communities with 'find any Lagos address' hook	100 riders in Month 1
APK direct download	Bypass Play Store friction — direct APK link for faster onboarding	Reduces drop-off by ~40%

Unit Economics Target

CAC (vendor)	Target under N15,000 (~\$10). At N4,999/month, payback period is 3 months.
LTV (vendor)	Conservative: N4,999 x 18 months = N89,982. LTV:CAC ratio > 6:1 at scale.
CAC (rider)	Near zero — physical presence + vendor mandate. This is the model's strength.
Churn target	Under 5%/month. Vendors who use the product daily will not easily leave.
Activation threshold	A vendor who completes 5+ tracked deliveries in Week 1 has a 70%+ retention rate.

8. FIRST 100 USERS PLAN

The first 100 users are not a marketing exercise. They are a research exercise. Every single one should be recruited manually, known by name, and interviewed after their first week.

Week	Action	Target Users	How
Week 1	Attend Yaba, Ikeja, Ajah dispatch hubs daily — 6am to 9am	25 riders	Hand-install app. Show landmark navigation live. Ask them to try it on next delivery.
Week 1	DM 30 Lagos Instagram vendors with specific pain point message	10 vendors	Message: 'Do you use dispatch riders? I built something that shows you where they are in real time.'

Week 2	Ask first 10 vendors to invite their own riders	25 riders	Vendor mandate — fastest rider acquisition channel by far.
Week 2	Post on LinkedIn with demo video — dispatch hub footage	10 vendors + riders	60-day challenge audience. Direct CTA to waitlist.
Week 3	Run 1 WhatsApp vendor group post in 3 Lagos SME groups	15 vendors	Share a before/after story: 'Before RouteIQ vs After RouteIQ' — one real vendor's experience.
Week 3	Ask 5 early riders to share APK link in their own rider groups	15 riders	Rider-to-rider word of mouth. Incentive: Verified Rider badge for top sharers.

Target: 100 users (70 riders + 30 vendors) by end of Week 3. Definition of success: 15 vendors complete 5+ tracked deliveries. That is your PMF signal.

9. COMPETITIVE POSITION & MOAT

Competitor	Threat Level	Gap vs RoutelQ	RoutelQ Counter
Google Maps	LOW (short term) MEDIUM (3yr)	No landmark routing, no dispatch tracking, no Nigerian street-level accuracy	Data network effect — every delivery makes RoutelQ smarter. Google has no incentive to crowdsource Lagos landmark data.
Sandbox	MEDIUM	Has logistics workflow but zero mapping layer. No live rider location for vendors.	RoutelQ's mapping layer is the moat Sandbox cannot quickly replicate.
Kwik Delivery	LOW	Closed network — only their own riders. No vendor-brings-own-rider model.	RoutelQ works with any rider. Flexibility is the wedge.
OkHi	LOW-MEDIUM	Address capture only. No navigation, no dispatch tracking.	RoutelQ could license OkHi's address database as a data partner rather than competitor.
New entrant (funded)	HIGH (12–18 months)	Well-funded competitor could replicate features	First-mover in landmark data is sticky. The data collected in Year 1 cannot be instantly replicated even with funding.

Moat Stack — Ranked by Defensibility

Moat	Type	Strength	Timeline to Build
Landmark map data (crowd-sourced)	Data network effect	VERY HIGH — compounds with every delivery	12 months of active use
Vendor workflow integration	Switching cost	HIGH — once embedded in daily ops, switching is painful	3–6 months per vendor
Rider community trust	Community network	MEDIUM — riders who earn more jobs via app won't leave	6 months
Brand as 'the Nigerian GPS'	Perception moat	MEDIUM — first to claim the category owns the category	Ongoing
Proprietary routing algorithm	Technical moat	MEDIUM — built on unique Nigerian landmark dataset	18 months

10. REVERSE SWOT ANALYSIS

Flipping assumptions — what if our strengths are actually risks?

Category	Standard View	Reverse View — The Hidden Risk
STRENGTH: ML/Engineering skills	Founder can build fast and build well	Risk of over-engineering. Technical founders often build before validating. The 30-day plan must be research-first, not code-first.
STRENGTH: No incumbent in the space	Clear market opportunity	If no one has built this, ask why. Is it technically too hard? Is the willingness to pay actually lower than assumed? Validate before assuming the space is just overlooked.
WEAKNESS: Idea stage, no users yet	Standard early-stage limitation	Opportunity — zero legacy code, zero bad assumptions baked in. The blank slate is an advantage if used for research, not building.

OPPORTUNITY: 18% logistics growth	Macro tailwind behind the product	Risk — a growing market attracts well-funded entrants. Growth validates the market for competitors too. Speed of execution matters more than market size.
THREAT: Google Maps improves Nigeria	Existential competitive risk	Unlikely — but if Google does invest in Nigeria, RouteIQ's dispatch tracking layer is completely outside Google Maps' product scope. The moat shifts from mapping to accountability.

11. INVESTOR ONE-LINER & 30-SECOND PITCH

Investor One-Liner

RoutelQ is the navigation and dispatch accountability layer for Nigerian last-mile logistics — turning 800,000 untracked dispatch riders into a verified, landmark-routed delivery network.

30-Second Founder Pitch

Every day in Lagos, thousands of vendors send packages with dispatch riders and have absolutely no idea where those packages are.

Google Maps doesn't know Nigerian streets. Riders get lost.

Vendors can't track anything. Customers get angry. Money is lost.

RoutelQ fixes this — landmark-based navigation for riders, live tracking and proof of delivery for vendors, starting at ₦4,999 a month.

The market is \$2.1 billion. No one owns it yet. We intend to.

12. INVESTMENT SCORECARD (0–100)

Dimension	Score	Reasoning	Key Risk
Business Viability	72/100	Clear problem, clear paying customer, credible revenue model	Freemium-to-paid conversion unproven
Revenue Potential	78/100	\$340M SAM, 18% growth, multiple revenue streams, strong LTV:CAC potential	Year 1 revenue modest — patient capital required
GTM Strength	65/100	Word-of-mouth flywheel is sound; dispatch hub seeding is smart	Founder-led sales limits early scale
Competitive Strength	74/100	No incumbent. Data moat compounds. Switching costs grow with vendor integration.	Well-funded entrant in 12–18 months
Investor Readiness	61/100	Strong narrative, clear ICP, honest about stage	No revenue, no users, no MVP yet — pre-seed only

COMPOSITE INVESTMENT SCORE

70 / 100 — INVESTABLE with Conditions (Pre-Seed Stage)

13. VISUAL DASHBOARD

Key business metrics, GTM flow, competitive moat, and investment scores at a glance.

14. FOUNDER ACTION SHEET — TOP 10 NEXT ACTIONS

Sequenced by impact. Do not move to the next action until the current one is complete.

#	Action	Deadline	Success Signal	Priority
1	Write one paragraph: the exact dispatcher/GPS failure that would make Vivian pull out her card today. This becomes your sales message.	Day 2	You can say it out loud in 20 seconds without notes	CRITICAL
2	Attend Yaba or Ikeja dispatch hub at 6:30am. Talk to 5 riders. Ask: 'When was the last time Google Maps sent you to the wrong place?'	Day 5	You have 5 recorded voice notes with specific stories	CRITICAL
3	DM 20 Lagos Instagram vendors: 'Do you use dispatch riders? I'm building something that shows you exactly where your package is — can I get 10 mins?'	Day 5	5+ positive responses and 3+ calls booked	CRITICAL
4	Complete 20 user interviews total (10 riders, 10 vendors). Use the same 5 questions each time. Record everything.	Day 14	You hear the same pain described in the same words by 7+ people	CRITICAL
5	Ask 5 vendors directly: 'If this app existed today and showed you your rider's location live, would you pay N4,999 per month?' Get a yes or no — not a maybe.	Day 14	3+ clear YES answers = green light to build	CRITICAL
6	Assess OpenStreetMap Nigeria data quality for Lagos. Download, visualise, identify the 10 highest-gap areas.	Day 10	You know exactly what map data you have and what you need to collect	HIGH
7	Define MVP in one sentence: who does what using your app. Write it on paper. Tape it to your wall.	Day 15	The sentence has not changed in 3 days	HIGH
8	Build MVP v0 in 7 days: landmark address sharing + live rider pin only. No extras.	Day 22	5 test deliveries completed using the app	HIGH
9	Create Carrd landing page with waitlist. Add a 60-second demo video filmed at a dispatch hub.	Day 27	Page is live with working email capture	MEDIUM
10	Post on LinkedIn: 'I went to Yaba dispatch hub at 6:30am. Here is what I learned.' Share the waitlist link.	Day 29	100 waitlist signups within 72 hours	HIGH

15. SUSTAINABILITY VERDICT

SUSTAINABILITY VERDICT

INVESTABLE — Build with Discipline

Composite Score: 70/100 | Stage: Pre-Seed | Verdict: GO with Conditions

RoutelQ Nigeria has the structural ingredients of a sustainable business: a specific, daily, financially painful problem; a clearly identified paying customer who has no adequate alternative today; a network-effect flywheel where free rider adoption creates paid vendor value; and a founder with the domain proximity, technical skills, and execution habit to build and ship quickly. The Nigerian logistics market at 18% annual growth provides a macro tailwind that makes the opportunity larger over time, not smaller.

The business is not yet sustainable — it has no users, no revenue, and no validated pricing. But the path to sustainability is unusually clear for an idea-stage startup: 20 interviews, 5 vendor pre-commitments, and a 7-day MVP build sprint. If those three gates are cleared, RoutelQ moves from 'promising concept' to 'early-stage fundable business' in under 30 days. The single

biggest risk between now and that point is the founder building before validating — a trap that kills more technically-capable startups than any competitor ever could.

The recommendation is unambiguous: do not open a code editor until at least 10 user interviews are complete and 3 vendors have said yes to the price. When those conditions are met, build fast, launch lean, and let the Lagos dispatch hubs at 7am do the marketing.
