

Vendor Vivian

Lagos SME Seller

Rider Rasheed

Lagos Dispatch Rider

Meet the two people
RoutelQ is built for.

A day in their lives. The problem. The fix.

Vendor Vivian

6:45am. Yaba, Lagos.

The morning starts before sunrise.

Orders packed. Labels printed. WhatsApp pinging.

80+

packages today

3

dispatchers on call

0

tracking tools

She calls Dispatcher 1. No answer.

She calls Dispatcher 2. "I'm almost there."

She has heard that before.

Her customer placed an order 3 days ago.

She has no idea where it is right now.

"I am managing a business. I should not be a private investigator."

The moment.

10:47am.

What does she do?

Issue a refund she cannot afford.

Apologise to a customer she might lose forever.

This happens multiple times a week.

There is no tool to stop it.

What Vivian needs.

Not a feature list. One sentence.

"Know where my package is at all times,
and know when it arrived."

- ☐ See her rider's live location on a map
- ☐ Get a photo the moment the package is delivered
- ☐ Receive a notification — not a phone call
- ☐ See all her riders in one dashboard
- ☐ Never issue another refund for a lie

Willingness to pay: HIGH — one lost package pays for 6 months

**Rider Rasheed**

7:10am. Oshodi, Lagos.

Rasheed has been riding dispatch for 3 years.

He knows Lagos. But Lagos keeps growing.

15+

deliveries daily

3 yrs

riding Lagos

~45m

lost per bad address

Today's first delivery: an estate in Ajah.

He has never been there.

He opens Google Maps.

It shows a street name nobody in the area uses.

He calls the customer. She doesn't pick up.

He asks two people on the street. Wrong directions.

He finds it eventually. 47 minutes later.

"That one delivery just cost me two more jobs."

The moment.

What one wrong address actually costs.

- Extra fuel burned backtracking ■ 800 wasted
- 47 minutes lost finding the estate 2 deliveries missed
- 3 calls to customer + 2 to vendor Airtime + frustration
- Late delivery — vendor marks him low priority Less work tomorrow
- Mental load — stress before 9am Affects all other deliveries

This is not laziness.

The map just does not speak his language.

This happens on 3 to 5 deliveries every single day.

What Rasheed needs.

Not a Google Maps clone. One thing.

**"Get me to any Lagos address
without a single phone call."**

☒ ☒ Directions using landmarks he already recognises

☐ The exact compound, not just the street name

☐ Works even when his data signal is weak

☐ Lightweight — under 15MB, low battery drain

☐ More completed deliveries = more earnings

Rasheed won't pay for this. He doesn't need to. He is the network.

They need each other.

RouteIQ is what connects them.

Vivian

Needs her rider
to be honest
and findable

RouteIQ

Navigation +
Accountability

Rasheed

Needs to find
any address
without calling

The flywheel:

Rasheed uses RouteIQ for navigation (free).

Vivian gets accountability as a result.

Vivian pays. Rasheed gets more jobs. Both win.

The MVP.

Not the film. Just the trailer.

01

Landmark address sharing

Vendor creates delivery address using Lagos landmarks.
Rider gets it as a link. No confusion.

02

Live rider GPS pin

Vendor opens link. Sees rider moving in real time.
No login needed. No app to download.

03

Delivery confirmation

Rider taps Delivered. Uploads photo. Vendor gets
a timestamped notification instantly.

04

Lightweight Android app

Under 15MB. Works on cheap phones.
Offline-tolerant. Low data.

Before any code. Before any investors. Before any pitch deck.

There is a dispatch hub in Yaba.

At 7am, it is full of Rasheeds.

Somewhere in Ajah, Vivian is already on WhatsApp chasing her dispatcher.

That is where this starts.
